

DISCHARGE SUMMARY - Hysterectomy - Discharge Summary - 1

Total vaginal hysterectomy. Menometrorrhagia, dysmenorrhea, and small uterine fibroids.

ADMISSION DIAGNOSES:

1. Menometrorrhagia.
2. Dysmenorrhea.
3. Small uterine fibroids.

DISCHARGE DIAGNOSES:

1. Menorrhagia.
2. Dysmenorrhea.
3. Small uterine fibroids.

OPERATION PERFORMED:

Total vaginal hysterectomy.

BRIEF HISTORY AND PHYSICAL:

The patient is a 42 year-old white female, gravida 3, para 2, with two prior vaginal deliveries. She is having increasing menometrorrhagia and dysmenorrhea. Ultrasound shows a small uterine fibroid. She has failed oral contraceptives and surgical therapy is planned.

PAST HISTORY:

Significant for reflux.

SURGICAL HISTORY:

Tubal ligation.

PHYSICAL EXAMINATION:

A top normal sized uterus with normal adnexa.

LABORATORY VALUES:

Her discharge hemoglobin is 12.4.

HOSPITAL COURSE:

She was taken to the operating room on 11/05/07 where a total vaginal hysterectomy was performed under general anesthesia. Postoperatively, she has done well. Bowel and bladder function have returned normally. She is ambulating well, tolerating a regular diet. Routine postoperative instructions given and said follow up will be in four weeks in the office.

DISCHARGE MEDICATIONS:

Preoperative meds plus Vicodin for pain.

DISCHARGE CONDITION:

Good.
