

HOSPITAL DISCHARGE SUMMARY

PATIENT DEMOGRAPHICS

Name: Patient 14

Age: 81 years old | Sex: Female

MRN: 000-TEST-14

Admission Date: [DATE] | Discharge Date: [DATE]

Length of Stay: 5 days

PRIMARY DIAGNOSIS

Acute exacerbation of Chronic Obstructive Pulmonary Disease (COPD), GOLD Stage IV (Very Severe)

SECONDARY DIAGNOSES

- Vascular dementia with behavioral disturbance
- Osteoporosis with history of vertebral compression fracture
- Hypertension, controlled
- Type 2 Diabetes Mellitus, non-insulin dependent
- Gastroesophageal reflux disease (GERD)

PULMONARY ASSESSMENT AT DISCHARGE

FEV1/FVC ratio: 38% (severe airflow obstruction)

Room air SpO2: 88% at rest; 84% with ambulation

Supplemental O2 requirement: 2L/min via nasal cannula at rest; 3L/min with exertion

Dyspnea grade: Moderate (mMRC score 3/4)

HOSPITAL COURSE & CLINICAL EVENTS

Pt. admitted via ED with acute SOB, productive cough (purulent sputum), and DOE × 3 days. Initial SpO2 84% on RA. CXR revealed hyperinflation and mild peribronchial infiltrate, consistent with infectious trigger. Sputum culture pending; empiric antibiotics initiated.

Spirometry confirmed GOLD IV disease with significantly reduced FEV1 (0.68L, 31% predicted). Pt. required escalation to high-flow mask day 2 due to desaturation below 86% with exertion. IV methylprednisolone 125mg q6h × 2 days, then transitioned to oral prednisone taper. Nebulized albuterol/ipratropium q4h scheduled; frequency reduced to q6h by day 4 as clinical improvement noted. Dementia care coordinated with family; behavioral episodes managed with PRN haloperidol. Osteoporosis risk mitigated; PPI continued. Discharged when SpO2 ≥88% at rest on 2L O2 and ambulating safely with PT clearance.

DISCHARGE MEDICATIONS

| Medication | Dose | Frequency | Duration |

|---|---|---|---|

| Fluticasone/Umeclidinium (LAMA/ICS) | 113/62 mcg | 1 inhalation daily | Ongoing |

| Salmeterol/Fluticasone (LABA/ICS) | 50/250 mcg | 1 inhalation BID | Ongoing |

| Tiotropium (LAMA) | 18 mcg | Once daily (evening) | Ongoing |

| Albuterol HFA | 90 mcg/actuation | 2 puffs q4-6h PRN | Ongoing |

| Prednisone (taper) | 40mg → 30mg → 20mg → 10mg → 5mg | Daily × 2 days; then daily × 2 days; then daily × 2 days; then daily × 2 days | 10-day taper |

| Azithromycin (Z-pack completed) | 500mg | Day 1, then 250mg q.d. | 5 days total (completed) |

| Amlodipine | 5mg | Once daily | Ongoing |

| Metformin | 500mg | BID with meals | Ongoing |

| Omeprazole | 20mg | Once daily | Ongoing |

| Calcium carbonate + Vitamin D3 |
